Engineering, Xi'an Jiaotong  
University, Xi'an 710049, China

Deadline for manuscript  
submissions:

**closed (31 March 2023)**

### Message from the Guest Editors

Dear Colleagues,

The vision for sustainable world and a carbon neutral future would be illusory without the current combustion technology to have a fundamental shift into a low carbon energy source. The combustion diagnostic technologies, including spectroscopic measurement and imaging of the absorption, emission, and scattering interaction between combustion field and light source, are undergoing rapid development from qualitative to quantitative interpretation and from time-averaged measurement to instantaneous and time-resolved measurement, which are often based on lasers to provide the temporal and spacial requirements.

In this Special Issue, we invite submissions exploring cutting-edge research and recent advances in a wide field of combustion and combustion diagnostic techniques, from turbulent flame, swirl flame, spray flame, Mild combustion, catalytic combustion, e-fuel, and other advanced combustion techniques.

## Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
