Message from the Guest Editor

Dear Colleagues,

While dental pulp and the periodontium are two distinct tissues, there are many potential routes of interaction between them, such as the apical foramen, dentinal tubules, lateral and accessory canals, anatomical variations, pathological conditions and treatment complications such as root fractures or perforations. Following bacterial colonization, the exposure of endodontic biofilm to the periodontium and vice versa may initiate pathological processes in these tissues.

This Special Issue will present the current research on the etiological factors of endodontic–periodontal lesions, classifications, prognoses and modern approaches to the clinical management of these pathologies using endodontic, periodontal, and restorative procedures, as well as treatment alternatives in cases when extraction is necessary.

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
