submissions:

closed (30 June 2022)

Message from the Guest Editors

Dear Colleagues,

We invite you to contribute to this Special Issue on “Fungi Associated with Indoor Environments and Materials” of the journal *Applied Sciences*.

This Special Issue aims to compile recent outstanding research on mycobiomes associated with these particular habitats, covering basic or applied studies on the following topics:

- Indoor environments: residential, occupational, and public buildings, as well as subterranean environments (e.g., caves, mines, and tombs);
- All materials susceptible to being colonised and/or degraded by fungi, including both indoor and outdoor materials;
- Driving factors and spatiotemporal evolution of mycobiomes;
- Aerobiological studies related to the dispersal of aerosols and indoor air quality;
- Biofilm-forming and material-deteriorating fungi;
- Moisture and mould damages in buildings;
- Human exposure to mycobiomes (respiratory symptoms, mycotoxins, microbial volatile organic compounds);
- Development of indoor environmental assessment protocols.

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
