submissions:

31 December 2024

Message from the Guest Editor

Dear Colleagues,

Breeding, production, and processing technologies have the potential to enhance the shape, size, color, flavor, and health benefits of fruit. This Special Issue covers the technological advancements in fruit breeding for increased nutritional and nutraceutical quality, among other phenotypic parameters. The advancements in production practices may include mechanization, monitorization, and robotics, as well as other cost-reducing production practices. The scientific efforts and novel processing as well as preservation practices will retain initial quality and nutritional characteristics while limiting microbial decay.

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
