Torino, Italy

Deadline for manuscript  
submissions:

**closed (28 February 2022)**

### **Message from the Guest Editor**

Dear Colleagues,

Soil contamination has been inherited from industrial development. The quality of soil is threatened by many human activities, including mining exploitations, transportation, improper management of waste, and intensive agriculture practices. Soil remediation is of paramount importance, since soil pollution greatly influences the quality of water, food, and human health.

In this Special Issue, we invite submissions exploring the development of technologies for green remediation that can tackle the issue of remediation of contaminated soils with the greatest attention to environmental quality, including the preservation of soil productivity. Survey papers and reviews are also welcome.

## Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
