Deadline for manuscript  
submissions:

**20 August 2024**

### Message from the Guest Editors

Ultrasound evaluations are performed in all medical fields and represent a valuable instrument in clinical medicine and the research area. Elastography is used to assess tissue stiffness, with the potential of differentiating benign from malignant tissues. It offers quantitative and qualitative information concerning tissue stiffness by measuring the tissue elasticity index. Elastography is a validated marker of pathological states, approved in many clinical areas, improving diagnostic methods and establishing its role in the field of endocrinology, hepato-gastroenterology, senology, urology, and otorhinolaryngology.

In this Special Issue, we invite submissions exploring endocrine disease and disorders of small parts as well as superficial structures. This Special Issue invites the submission of both original and review papers, technical papers, and clinical papers exploring any aspect of ultrasound and elastography imaging.

## Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
