Deadline for manuscript submissions:

**20 November 2024**

### Message from the Guest Editors

Dear Colleagues,

The intelligent transportation system effectively integrates advanced information, communication, sensor, electronic control, and computer technology into transportation, service control, and vehicle manufacturing. This results in harmony and close cooperation between people, vehicles, and roads, thus improving transportation efficiency, easing traffic jams, reducing traffic accidents, and decreasing energy consumption and exhaust emissions. With the advancement of a new round of scientific and technological revolution and industrial transformation, some new technologies and ideas are emerging and being applied to intelligent transportation systems. To better grasp the current development trend of domestic and overseas intelligent transportation systems, promote the foundation research and technological innovation of intelligent transportation systems, and deepen the academic exchanges of intelligent transportation systems, we are organizing a Special Issue titled "Application of new technology and new ideas in intelligent transportation system".

## Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
