Deadline for manuscript  
submissions:

**closed (20 May 2024)**

### Message from the Guest Editor

We are pleased to invite you to contribute your recent research on the newest ultrasound applications, such as viscosity or the contrast-enhanced ultrasound technique, used in the diagnosis of liver fibrosis and diffuse thyroid disease, respectively, nodular pathology in the liver, thyroid or testes.

From a clinical point of view, this Special Issue aims to provide information regarding the application of ultrasounds in decision-making processes.

In this Special Issue, original research articles and reviews are welcome. Research areas may include, but not limited to, the following:

- Defining normal in visco technique;
- Viscosity in diffuse thyroid disease;
- Viscosity in diffuse liver disease;
- Multiparametric ultrasound diagnosis of thyroid disease;
- Multiparametric ultrasound diagnosis of parathyroid disease;
- Multiparametric ultrasound diagnosis of renal disease;
- Multiparametric ultrasound diagnosis of testicular pathology;
- Clinical applications of CEUS.

## Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal *Applied Sciences* has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, Embase, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
