Prof. Dr. Ewa Pawłuszewicz

Faculty of Mechanical
Engineering, Białystok University
of Technology, 15-351 Białystok,
Poland

Deadline for manuscript
submissions:

closed (25 January 2022)

Message from the Guest Editors

Despite linear simplifications, real industrial systems are generally non-linear and often very complex. The analysis of nonlinear systems seeks to discover their properties, while the design of an appropriate control strategy enables practitioners to take care over the process. Therefore, efficient nonlinear control should take into account various nonlinear aspects, such as modelling, control system design, stability analysis, and its assessment and sustainability. In fact, any industrial system is additionally subject to unknown uncertainties, these unknown environments are often complex and have strange properties.

The nonlinear nature of the industrial real-time processes requires analysis with novel ideas of fractional calculus, entropy, divergence or multi-fractality, and causality analysis, among others. In this Special Issue of Applied Sciences, we want to address these state-of-the-art nonlinear analysis and control issues, with the main focus being on their industrial background and realizations using limited assumptions and model-free approaches. In this Special Issue, we will publish both original and review scientific articles, as well as short communications.

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. Giulio Nicola Cerullo

Dipartimento di Fisica,
Politecnico di Milano, Piazza L.
da Vinci 32, 20133 Milano, Italy

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
