University, Nanjing 210096, China

Deadline for manuscript
submissions:

closed (10 October 2021)

Message from the Guest Editors

Dear Colleagues,

In the era of rapid urbanization and climate change, cities have to confront drastic energy demand and environmental issues. An urban energy system is a powerful tool that combines advanced computational and simulation techniques and rich urban information (such as infrastructure, urban morphology, etc.) to establish a viable and reliable urban energy analysis. The urban energy system is a comprehensive platform that is associated with the urban energy assessment, urban energy planning, and design, energy supply technology, urban energy-saving technology, etc. As the development and investigation of the urban energy system are such complex, multi-scale, multi-sectoral, and interdisciplinary challenges, this Special Issue would invite all research related to theories and technologies and including, but not limited to, the design, plan, and assessment of urban energy systems.

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
