Message from the Guest Editor

Dear Colleagues,

Nanostructured materials are finding wider use in modern technological products in many areas, such as coatings, displays, flexible electronics, energy conversion, energy storage, sensors and MEMS devices. Material combinations, interfaces and 3D structures have been used to enhance their electronic, magnetic, optical and mechanical properties. The Special Issue will try to bring together what has been learnt regarding the synthesis and characterisation of nanostructured materials and how their structure, combinations and defects affect and control their functional properties. Areas of interest include all aspects of nanostructured material synthesis, characterisation and modelling.

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
