submissions:

closed (31 October 2019)

Message from the Guest Editors

Dear Colleagues,

Thin films and engineered surfaces have a huge potential to both limit the production of pollutants and to mitigate against the effects of existing environmental contamination and greenhouse gases. This Special Issue aims to cover recent trends and the latest research advances in the field of thin film production, characterization, and application to such aspects as environmental remediation, clean manufacturing, and green energy production.

In particular, the topics of interest include but are not limited to the following:

- Photocatalytic/catalytic thin films for depollution and disinfection;
- Energy storage materials;
- Thin films for H₂ production by water splitting;
- Graphene and graphene-based materials;
- Thin films for solar cells/fuel cells;
- Thin films for environmental sensors;
- Bioinspired thin films;
- Thin films for membranes and filters;
- Thin films for self-cleaning and anti-fouling surfaces;
- Advances in environmentally friendly methods of thin film production.

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
