Message from the Guest Editors

Dear Colleagues,

We are inviting submissions to the Special Issue on Wildland-Urban Interface and Risk of Wildfires. The wildland-urban interface (WUI), defined as the area where houses are in or near wildland vegetation, is the area where wildfires pose the greatest risk to people and goods due to the proximity of flammable vegetation. The WUI fire risks are inherently a multi/interdisciplinary problem that requires a holistic approach, from a technological point of view to the management of the built-environment and forest, evacuation, socio-economic impacts and health, climate changes and sustainability, education and raising awareness and public policies, promoting the adoption of sounding protocols/regulations amongst all civil protection bodies and civil society.

Deadline for manuscript
submissions:

closed (23 September 2022)

an Open Access Journal by MDPI

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
