Deadline for manuscript  
submissions:

**closed (15 April 2021)**

### Message from the Guest Editors

The current trends in analytical chemistry advocate the development of sustainable methodologies which have a minimal impact on environment and reduce or eliminate the use and generation of hazardous substances. In fact, the application of low-toxicity or nontoxic solvents such as DES and, most recently, natural DES (NADES) has become one of the most important actions. This new generation of green materials is constituted by at least two components, a hydrogen bond donor (HBD) and a hydrogen bond acceptor (HBA) that, when combined, produce a new substance with higher volatility than that of the initial reagents. DES and NADES presents variable and unique properties that make them excellent materials to be applied in many fields, including analytical chemistry. They have been used not only as solvents in sample preparation, but also as stationary phases and sensors components or as additives in mobile phases.

The aim of this publication is to present the most recent applications of DES and NADES in the area of analytical chemistry, as well as provide a wide and accurate overview of the recent advances and future trends in the field.

an Open Access Journal by MDPI

## Editor-in-Chief

**Prof. Dr. Giulio Nicola Cerullo**  
Dipartimento di Fisica,  
Politecnico di Milano, Piazza L.  
da Vinci 32, 20133 Milano, Italy

## Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
