Prof. Dr. Hyuntae Park

Department of Health Care
Science, Dong-A University,
Busan 49315, South Korea

Deadline for manuscript
submissions:

20 November 2024

Message from the Guest Editors

Dear Colleagues,

The adoption of machine learning and deep learning analytics in the bio-medical field is progressing at a rapid pace, with some applications already used in pre-clinical and clinical settings. In addition, various types of bio-medical data continue to be used, and the CNN, RNN, and transformer technologies used of analysis continue to be further developed. There are many types of bio-medical data, such as image data, pathological tissue data, waveform data, natural language data, genetic data, and voice data, etc.

In this Special Issue, we aim to collect the current research on the latest machine learning and deep learning techniques of various bio-medical data. Additionally, a hypothesis for a fusion analysis technique of various bio-medical data would be most welcome.

Dr. Do-Young Kang

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
