### Message from the Guest Editor

The new challenges nowadays lie in the treatment of wastewaters from numerous industrial processes. Industrial wastewaters usually have higher loads of pollutants with varying properties, complex composition and high flow/load variations, which makes it a challenge to effectively treat these waters. Over the last years, there has been a significant increase in studies investigating the potential of applying different constructed wetland designs in the industrial sector.

This Special Issue aims at presenting recent developments in testing and applying constructed wetlands technology for the treatment of wastewaters from various industrial facilities and processes. It accepts contributions from both research projects related to the topic and experiences from full-scale applications in the industrial sector. Review papers summarizing the existing knowledge and technological status of constructed wetland systems applied to specific industrial wastewater sources are also welcome.

da Vinci 32, 20133 Milano, Italy

## Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
