Message from the Guest Editor

Dear Colleagues,
Municipal water and agricultural irrigation water are important parts of water demand. The physicochemical characteristics of the municipal wastewater suggest that there are potential opportunities to recycle nutrients for agricultural production. With this Special Issue, we would like to share novel treatment strategies and technologies that may contribute to the sustainability and safety of water and wastewater treatment, and water reuse in agriculture.

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
