Deadline for manuscript
submissions:

30 June 2024

Message from the Guest Editors

Dear Colleagues,

The main objective of this Special Issue is to contribute to our understanding of ET processes and their role in the interactions among the different spheres of earth. Papers that present science-based knowledge, novel ideas/approaches and solutions in ET observation and modelling are welcome. Original research, systematic reviews, meta-analyses, and model studies related to the observation and modelling of ET are welcome. Example topics include, but are not limited to, the following:

New observation instruments or algorithms to improve the ET observation accuracy;

Development of ET inversion based on satellite remote sensing;

Evaluation of ET simulations among the different hydrological/ecological models;

Data assimilation/parameter optimization to improve ET simulation accuracy;

Machine learning fusion to improve ET estimation.

We very much look forward to your submissions.

Dr. Zhenhua Di

Message from the Editor-in-Chief

Continued developments in instrumentation and modeling have driven atmospheric science to become increasingly more complex with a deeper understanding of concepts, mechanisms, and interactions. This is the field that innovation built and it has led to a better appreciation for the complexity with atmosphere. Human life is intertwined in this complexity as we strive to better understand our atmosphere. Climate change is constantly stretching the limits of our thinking and forcing new ideas and concepts to be played out. Welcome to the Anthropocene!

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, Inspec, CAPlus / SciFinder, Astrophysics Data System, and other databases.

Journal Rank: CiteScore - Q2 (*Environmental Science (miscellaneous)*)
