Deadline for manuscript
submissions:

31 October 2024

Message from the Guest Editor

Dear Colleagues,

After successfully launching the first volume of this Special Issue, "Exposure Assessment of Air Pollution":

https://www.mdpi.com/journal/atmosphere/special_issues/expo

we decided to expand our Special Issue into a second volume to include more related research.

This Special Issue welcomes research considering all the different aspects related to exposure assessment. In particular, it will involve, but is not limited to, studies (a) evaluating exposure to different pollutants, particularly microenvironments (both indoor and outdoor); (b) investigating the effectiveness of technical solutions to reduce exposure; (c) modeling the dynamics of different pollutants to predict exposure; (d) highlighting the effect of instruments' metrological performance on the proper evaluation of exposure; (e) characterizing emissions from sources not yet examined; and (f) proposing new exposure assessment methods and approaches.

Message from the Editor-in-Chief

Continued developments in instrumentation and modeling have driven atmospheric science to become increasingly more complex with a deeper understanding of concepts, mechanisms, and interactions. This is the field that innovation built and it has led to a better appreciation for the complexity with atmosphere. Human life is intertwined in this complexity as we strive to better understand our atmosphere. Climate change is constantly stretching the limits of our thinking and forcing new ideas and concepts to be played out. Welcome to the Anthropocene!

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, Inspec, CAPlus / SciFinder, Astrophysics Data System, and other databases.

Journal Rank: CiteScore - Q2 (*Environmental Science (miscellaneous)*)
