Park, MD, USA

Deadline for manuscript
submissions:

closed (31 May 2019)

Message from the Guest Editor

Dear Colleagues,

For this Special Issue, we aim to provide the community a valuable resource by organizing the most recent contributions to the study of aerosol droplets. Such creative works may take the form of exceptional literature review articles that outline recent developments in the field. Alternatively, authors may describe the development and application of novel measurement methods for study of atmospheric droplets. Additional contributions might include manuscripts that focus on summary ambient measurements and/or the transformation of particle properties during atmospheric processing. Lastly, laboratory and modeling studies are welcome contributions to this Special Issue. In short, all contributions that improve our understanding of atmospheric droplets are welcome.

Message from the Editor-in-Chief

Continued developments in instrumentation and modeling have driven atmospheric science to become increasingly more complex with a deeper understanding of concepts, mechanisms, and interactions. This is the field that innovation built and it has led to a better appreciation for the complexity with atmosphere. Human life is intertwined in this complexity as we strive to better understand our atmosphere. Climate change is constantly stretching the limits of our thinking and forcing new ideas and concepts to be played out. Welcome to the Anthropocene!

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, Inspec, CAPlus / SciFinder, Astrophysics Data System, and other databases.

Journal Rank: CiteScore - Q2 (*Environmental Science (miscellaneous)*)
