Deadline for manuscript
submissions:

closed (30 November 2019)

Message from the Guest Editor

The interdisciplinary field of Atmospheric Hazards is occupied by a variety of researchers approaching topics and problems from multiple paradigms in the physical and social sciences. In this special issue of Atmosphere, I hope to organize a collection of novel submissions that can be either rooted in social science, physical science, or a blend of the two. A specific submission emphasis will be devoted to research involving severe weather, tornadoes, tropical cyclones, and extreme events. Research focused upon the study of perception and risk communication for these events will be prioritized for inclusion in the issue, but all research involving the above topics is encouraged.

Message from the Editor-in-Chief

Continued developments in instrumentation and modeling have driven atmospheric science to become increasingly more complex with a deeper understanding of concepts, mechanisms, and interactions. This is the field that innovation built and it has led to a better appreciation for the complexity with atmosphere. Human life is intertwined in this complexity as we strive to better understand our atmosphere. Climate change is constantly stretching the limits of our thinking and forcing new ideas and concepts to be played out. Welcome to the Anthropocene!

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, Inspec, CAPlus / SciFinder, Astrophysics Data System, and other databases.

Journal Rank: CiteScore - Q2 (Environmental Science (miscellaneous))
