Message from the Guest Editors

Dear Colleagues,

Energetic reliance on oil and gas causes relevant impacts on air quality and health due to the emissions caused by extraction and production processes, including oil spills, venting, flaring, pretreatment, refining, and leakages. Despite an extensive literature on gaseous emissions from oil/gas industry, few works have focused on particulate matter characterization. The main aim of this Special Issue is to collect and present results obtained by monitoring and characterizing aerosol emissions from Oil/Gas producing activities worldwide.

We invite you to submit original research articles and reviews in the field of aerosol study at oil/gas areas including but not limited to:

Oil/Gas pollutants Aerosol chemical and optical characterization Aerosol aging Carbonaceous aerosol Aerosol-gases interactions Organic pollutants Flaring and venting emissions from radiometric measurements Health impacts of Oil/Gas industries Oil/Gas emission inventories

Message from the Editor-in-Chief

Continued developments in instrumentation and modeling have driven atmospheric science to become increasingly more complex with a deeper understanding of concepts, mechanisms, and interactions. This is the field that innovation built and it has led to a better appreciation for the complexity with atmosphere. Human life is intertwined in this complexity as we strive to better understand our atmosphere. Climate change is constantly stretching the limits of our thinking and forcing new ideas and concepts to be played out. Welcome to the Anthropocene!

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, Inspec, CAPlus / SciFinder, Astrophysics Data System, and other databases. **Journal Rank:** CiteScore - Q2 (*Environmental Science (miscellaneous)*)
