Message from the Guest Editor

For this Special Issue we seek the best contemporary research on rural and remote continental aerosol. We encourage colleagues to think creatively and broadly about how their work may relate to these geographic regions so we may represent a diverse segment of the current state-of-the-art. We are interested in understanding both how sparsely populated regions are affected by exogenous aerosol sources and how particles produced and/or transformed in these regions affect other areas, both near and far. Regular papers, negative results, short papers and discussion/position papers are welcomed. If in doubt about the suitability of the research for the SI, potential authors are invited to discuss the idea with the Guest Editor before preparing the paper.

Message from the Editor-in-Chief

Continued developments in instrumentation and modeling have driven atmospheric science to become increasingly more complex with a deeper understanding of concepts, mechanisms, and interactions. This is the field that innovation built and it has led to a better appreciation for the complexity with atmosphere. Human life is intertwined in this complexity as we strive to better understand our atmosphere. Climate change is constantly stretching the limits of our thinking and forcing new ideas and concepts to be played out. Welcome to the Anthropocene!

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, Inspec, CAPlus / SciFinder, Astrophysics Data System, and other databases.

Journal Rank: CiteScore - Q2 (*Environmental Science (miscellaneous)*)
