New Insights into Ultracold Matter

Guest Editors:

Dr. Andrea Richaud

Departament de Física,
Universitat Politècnica de
Catalunya, Campus Nord B4-B5,
E-08034 Barcelona, Spain

Dr. Albert Gallemí

Institut für Theoretische Physik,
Leibniz Universität, 30167
Hannover, Germany

Dr. Juan Polo

Quantum Research Center,
Technology Innovation Institute,
Abu Dhabi P.O. Box 9639, United
Arab Emirates

Deadline for manuscript
submissions:

30 September 2024

Message from the Guest Editors

Dear Colleagues,

The potential to cool matter down to remarkably cold temperatures has opened the door to the discovery of a plethora of phenomena in quantum mechanical platforms that can currently be routinely observed, controlled, and manipulated with unprecedented precision. Furthermore, research on ultracold-matter systems displays an incredible theoretical–experimental synergy that pushes forward our understanding of the quantum world.

In this Special Issue, we welcome original and review articles at the forefront of ultracold-matter research from both the theoretical and experimental side. Examples of topics include, but are not limited to, quantum mixtures, supersolidity, dipolar interactions, spin–orbit coupling, solitons, vortices, and superfluid turbulence. We also encourage the submission of manuscripts on the subjects of quantum magnetism, Rydberg atoms, polarons, exciton–polaritons, artificial gauge fields, many-body localization, and ultracold-matter-based quantum technologies, such as atomtronic devices.

Message from the Editor-in-Chief

The scope of *Atoms* is deliberately wide and encompasses a large part of theoretical and experimental atomic, molecular, nuclear, and chemical physics in order to encourage cross-disciplinary connections, while supporting the more traditional idea of individual subfields. The journal is also interested in papers concerning the computation and compilation of data related to applications in the above areas. Details of experimental methods and codes are welcome. Your research is taken seriously and peer-reviewed with care. I encourage you to contact me or any of the Editorial Board Members for further information.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), Astrophysics Data System, Inspec, CAPlus / SciFinder, INSPIRE, and other databases.

Journal Rank: CiteScore - Q2 (*Nuclear and High Energy Physics*)
