## **Special Issue**

# Translational Research in Audiology

## Message from the Guest Editor

Growing understanding of physiological processes and morphology of the auditory system deepens our understanding of functional audiological diagnostics. However, there is still a sizeable translational gap between the clinical and basic research in audiology, the main being the inability to perform pure tone audiogram or speech comprehension tests in animals and the lack of techniques that enable anatomical and morphological analysis in humans.

The special issue "Translational Research in Audiology" is dedicated to the "bench to bedside and back" aspect of audiological sciences. The main topics of this issue are translational qualities of research concerning the ototoxicity of drugs, application of stem cell technology, animal models of tinnitus, hyperacusis, and presbyacusis.

Experimental and clinical audiologists, otologists, neuroscientists, and biologists dealing with all sorts of animal models and clinical audiology are warmly invited to submit their research.

### **Guest Editor**

Prof. Dr. Agnieszka Szczepek

Department of Otorhinolaryngology, Head and Neck Surgery, Charité Universitätsmedizin, Berlin, Germany

## Deadline for manuscript submissions

closed (15 November 2022)

## **About the Journal**

## Message from the Editor-in-Chief

### Editor-in-Chief

Dr. Giacinto Asprella Libonati ENT Unit, Santa Maria delle Grazie Hospital, ASM Matera, 75100 Matera, Italy

## **Author Benefits**

## **High Visibility:**

indexed within Scopus, ESCI (Web of Science), PubMed, PMC. Embase, and other databases.

## **Journal Rank:**

JCR - Q2 (Audiology and Speech-language Pathology) / CiteScore - Q2 (Otorhinolaryngology)

## **Rapid Publication:**

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
