submissions:

31 December 2024

Message from the Guest Editor

Dear Colleagues,

This Special Issue is dedicated to the application of integral transformations to calculations of Green functions and scattering amplitudes in quantum gravity via the utilization of complex analysis, the Cauchy integral formula, the residue calculus technique and complex mapping. The Slavnov–Taylor identity relates different Green functions of quantum fields in gravity as well as in the Yang–Mills theory. In turn, the Slavnov–Taylor identity follows from the BRST symmetry of the classical action extended by certain additional terms. For the classical action, the BRST symmetry coincides with gauge symmetry. In gravitational theory, the gauge symmetry is represented by diffeomorphisms. The Green functions are defined in terms of the path integral whose measure is invariant with respect to BRST transformations. As a result of this BRST invariance, the Slavnov–Taylor identity appears in gravity.

Although the aim of this Special Issue is to publish original research articles on higher loop calculations in quantum gravity, focused on integral transformations involving complex variables, review articles on this subject are also welcome.

an Open Access Journal by MDPI

Mathematics, Public University of
Navarra, 31006 Pamplona, Spain

Message from the Editor-in-Chief

Axioms is dedicated to the foundations (structure and axiomatic basis, in particular) of mathematical theories, not only from a crisp or strictly classical sense, but also from a fuzzy and generalized sense. This includes the more innovative current scientific trends, devoted to discover and solve new challenging problems. The prime goal of *Axioms* is to publish first-class, original research articles under an open access policy with minimal fees for the authors. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High visibility: indexed within [SCIE \(Web of Science\)](#), [dblp](#), and [other databases](#).

Journal Rank: JCR - Q1 (Mathematics, Applied)

Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 21 days after submission; acceptance to publication is undertaken in 3.4 days (median values for papers published in this journal in the first half of 2024).
