

Current Research on Mathematical Inequalities II

Guest Editor:

Dr. Christophe Chesneau

Department of Mathematics,
Université de Caen, LMNO,
Campus II, Science 3, 14032 Caen,
France

Deadline for manuscript
submissions:

closed (30 June 2024)

Message from the Guest Editor

The subject of mathematical inequalities has always fascinated mathematicians, and is still the subject of numerous research articles. Mathematical inequalities can be self-sufficient, or be key parts of proofs of important theorems in all branches of mathematics. Inequalities are essential to mathematics; thus, any advancements in this area are welcome.

The following are just a few examples of the research topics considered in this Special Issue: conjectural inequalities with numerical evidence; inequalities in analysis (sophisticated or not, with special functions or not, applied or not); inequalities in approximation theory; inequalities in combinatorics; inequalities in economics; inequalities in geometry; inequalities in mechanics; inequalities in number theory; inequalities in optimization; inequalities in physics; inequalities in probability; and inequalities in statistics.

an Open Access Journal by MDPI

Axioms is dedicated to the foundations (structure and axiomatic basis, in particular) of mathematical theories, not only from a crisp or strictly classical sense, but also from a fuzzy and generalized sense. This includes the more innovative current scientific trends, devoted to discover and solve new challenging problems. The prime goal of *Axioms* is to publish first-class, original research articles under an open access policy with minimal fees for the authors. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: indexed within SCIE (Web of Science), dblp, and other databases.

Journal Rank: JCR - Q1 (Mathematics, Applied)
