Sciences, Tohoku University,
Sendai 980-8579, Japan

Dr. Chaofeng Zhang
Advanced Institute of Industrial
Technology, Tokyo 140-0011,
Japan

Deadline for manuscript
submissions:
31 July 2024

Message from the Guest Editors

Complex systems, defined as systems composed of a large number of interacting parts and characterized by non-linearity, adaptability, and dynamic changes, span various significant fields such as climatology, ecology, economics, social networks, cyber physical system, and biology. Due to their inherent characteristics, it is often challenging to accurately describe and predict complex systems using traditional mathematical and computational methods. Against this backdrop, AI technologies have become critically important in the study of complex systems. These AI algorithms themselves are examples of complex systems.

This Special Issue, "Mathematical Modelling of Complex Systems," aims to explore this two-way relationship, with a particular focus on research using mathematical modelling methods to aid AI technologies in the modelling and optimization of complex systems. We look forward to works that use mathematical tools from complex systems theory to understand and improve AI algorithms, as well as works that study complex systems from an AI perspective.

Special Issue

Editor-in-Chief

Prof. Dr. Humberto Bustince
Department of Statistics,
Computer Science and
Mathematics, Public University of
Navarra, 31006 Pamplona, Spain

Message from the Editor-in-Chief

Axioms is dedicated to the foundations (structure and axiomatic basis, in particular) of mathematical theories, not only from a crisp or strictly classical sense, but also from a fuzzy and generalized sense. This includes the more innovative current scientific trends, devoted to discover and solve new challenging problems. The prime goal of *Axioms* is to publish first-class, original research articles under an open access policy with minimal fees for the authors. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High visibility: indexed within SCIE (Web of Science), dblp, and other databases.
Journal Rank: JCR - Q2 (*Mathematics, Applied*)
