closed (28 February 2025)

Message from the Guest Editors

Dear Colleagues,

In this Special Issue, we would like to include recent developments in several branches of number theory, including analytic number theory, Diophantine equations and inequalities with prime numbers, square-free numbers of special forms, and Bombieri–Vinogradov type results. In each of these branches, remarkable results already exist, and current research will certainly lead to new advances. We welcome your research papers. Any new ideas are greatly welcomed!

Computer Science and
Mathematics, Public University of
Navarra, 31006 Pamplona, Spain

Message from the Editor-in-Chief

Axioms is dedicated to the foundations (structure and axiomatic basis, in particular) of mathematical theories, not only from a crisp or strictly classical sense, but also from a fuzzy and generalized sense. This includes the more innovative current scientific trends, devoted to discover and solve new challenging problems. The prime goal of *Axioms* is to publish first-class, original research articles under an open access policy with minimal fees for the authors. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High visibility: indexed within SCIE (Web of Science), dblp, and other databases.
Journal Rank: JCR - Q1 (Mathematics, Applied)
