Special Issue

Editorial Board Members' Collection Series: Fuzzy Modeling, Optimization and Computational Intelligence

Message from the Guest Editors

In many processes, such as in industry, engineering and the social sciences, it is not always possible to obtain full information about the data, parameters and variables involved in order to make decisions. The use of intervals and fuzzy sets is suitable to address this issue. The aim of this Special Issue is to promote and contribute new models and methods to provide optimal or efficient solutions in some sense, under interval and fuzzy uncertainty, with applications in the real world.

Axioms

About the Journal

Message from the Editor-in-Chief

Axioms is dedicated to the foundations (structure and axiomatic basis, in particular) of mathematical theories, not only from a crisp or strictly classical sense, but also from a fuzzy and generalized sense. This includes the more innovative current scientific trends, devoted to discover and solve new challenging problems. The prime goal of *Axioms* is to publish first-class, original research articles under an open access policy with minimal fees for the authors. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Humberto Bustince
Department of Statistics, Computer Science and Mathematics, Public University of Navarra, 31006 Pamplona, Spain

Author Benefits

Open Access
— free for readers, with article processing charges (APC) paid by authors or their institutions.
