

## Special Issue

# Advances in Dynamical Systems and Control

### Message from the Guest Editors

This Special Issue will compile frontier research in the areas of dynamical systems and control, both in theoretical and application advances. The study of dynamical systems and control is fundamental to promote advances in engineering; therefore, submissions on (but not limited to) the following topics are welcome:

- Chaos and bifurcations;
- Complex systems;
- Fractional difference equations;
- Fractional differential equations;
- Fuzzy control and fuzzy systems;
- Linear control systems;
- Math education in science and engineering;
- Matrix and spectral analysis;
- Modeling;
- Non-linear control systems;
- Stability and robust stability;
- Stability of pseudo-polynomials and quasi-polynomials.

## About the Journal

### Message from the Editor-in-Chief

*Axioms* is dedicated to the foundations (structure and axiomatic basis, in particular) of mathematical theories, not only from a crisp or strictly classical sense, but also from a fuzzy and generalized sense. This includes the more innovative current scientific trends, devoted to discover and solve new challenging problems. The prime goal of *Axioms* is to publish first-class, original research articles under an open access policy with minimal fees for the authors. We would be pleased to welcome you as one of our authors.
