Message from the Guest Editor

Dear Colleagues,

Solid-state batteries are attracting significant interest due to their safety, use of Li metal anodes, high energy density, and innovative processing routes. These properties are critical for the widespread adoption of electric vehicles. The adoption of lithium metal anodes is one of the main solutions to achieve high energy density due to their ultrahigh theoretical specific capacity (3960 mAh/g), low density (0.59 g/cm³), and lowest negative electrochemical potential (−3.040 V vs. the standard hydrogen electrode). Expectations for solid-state batteries are high, but there are significant challenges to overcome, such as high interfacial resistance on the cathode side and low critical current density, as well as high cost to scale-up.

In this Special Issue, we are looking for contributions helping to enhance the performance of solid-state batteries, understand failure mechanisms, and predict performance through modeling.

Topics of interest include but are not limited to:

- Novel materials, structures, and concepts;
- Enhanced cell performance;
- Advanced solid electrolytes for Li metal anode batteries;
- Scale-up;
- Modeling;
- Advanced characterizations.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Take the opportunity to publish your original scientific work or a review paper concerning battery materials, battery technology or battery application within this new open access journal. Along with material science, the journal also addresses engineering and multidisciplinary research topics, such as cell and system design or storage system integration. Publishing proffers visibility for the benefit of other experts and facilitates discussion of the research results within the field. You are invited to publish your work, read published papers and to participate in topical discussions.

Author Benefits

Open Access:— free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Inspec](#), [Ei Compendex](#), [CAPlus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q2 (Electrochemistry) / CiteScore - Q2 (Electrical and Electronic Engineering)
