Deadline for manuscript
submissions:

15 November 2024

Message from the Guest Editor

Dear Colleagues,

The ongoing “endurance mileage” anxiety has stimulated the energy-density increase of lithium-ion batteries, and great efforts have been made in understanding the inherent electrochemistry, and in developing advanced material systems. However, the energy density increase of LIBs inevitably accompanies the rising safety concerns. Thermal safety characteristics and thermal runaway mechanism investigations of LIBs are continuing to attract widespread interest. Deciphering the thermal failure route, behavior and mechanism of high energy density is of great importance in building next-generation batteries with enhanced safety.

Potential topics include, but are not limited to:

- Understanding heat generation characteristics during charge/discharge under isothermal or adiabatic situations.
- Thermal runaway route and mechanism of high-energy-density batteries.
- Simulation and modeling of self-heating of batteries during abuse conditions.
- Material-level investigation of the exothermic reaction during the thermal runaway chain reactions.
- New battery architectures or advanced electrodes or electrolyte materials to improve the thermal safety of batteries.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Take the opportunity to publish your original scientific work or a review paper concerning battery materials, battery technology or battery application within this new open access journal. Along with material science, the journal also addresses engineering and multidisciplinary research topics, such as cell and system design or storage system integration. Publishing proffers visibility for the benefit of other experts and facilitates discussion of the research results within the field. You are invited to publish your work, read published papers and to participate in topical discussions.

Author Benefits

Open Access:— free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Inspec](#), [Ei Compendex](#), [CAPlus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q2 (Electrochemistry) / CiteScore - Q2 (Electrical and Electronic Engineering)
