Message from the Guest Editor

Dear Colleagues,

Besides progress in battery cell manufacturing, complementary technologies must be developed and enhanced to adapt to new battery requirements so that one can use batteries to their full advantage. One such technology is the battery management system or BMS, which is responsible for monitoring, controlling, and protecting batteries. The BMS estimates a battery's status and its dynamic operating limits and uses this information to operate the battery within a safe and optimum operating window.

BMS performance crucially affects the driving range, lifetime, and safety of electric cars. Thus, it is important to use best-in-class hardware and software algorithms to achieve a higher performance. This Special Issue focuses on the topic of smart BMSs to enable improved battery performance, safety, and resiliency through smart functionalities, such as using artificial intelligence for state-of-X estimation, smart thermal management strategies, and reconfigurable and fault-tolerant topologies.

Message from the Editor-in-Chief

Take the opportunity to publish your original scientific work or a review paper concerning battery materials, battery technology or battery application within this new open access journal. Along with material science, the journal also addresses engineering and multidisciplinary research topics, such as cell and system design or storage system integration. Publishing proffers visibility for the benefit of other experts and facilitates discussion of the research results within the field. You are invited to publish your work, read published papers and to participate in topical discussions.

Author Benefits

Open Access:— free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Inspec](#), [Ei Compendex](#), [CAPlus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q2 (Electrochemistry) / CiteScore - Q1 (Electrical and Electronic Engineering)
