University, 69500 Bron, France

Deadline for manuscript  
submissions:

**closed (20 September 2024)**

### Message from the Guest Editors

Dear Colleagues,

To minimize the environmental impact of lithium-ion batteries at the end of life, there are two options: to recycle or reuse. A second life prior to recycling the batteries may improve their environmental balance. Second-life batteries are suitable for a number of applications despite their degraded performance.

Second-life batteries are either used batteries or a combination of their modules or cells. Due to characteristics dispersion, the elements must be selected and sorted. Performance evolution and battery behavior during second life must be observed. Specific energy management may be needed in second-life applications.

### ***Topics of interest in relation to second life batteries:***

- Characterization aging techniques and performance dispersion
- Post-mortem analysis
- Aging, thermal and electric modeling
- SoX estimation: State of Charge, State of Function and State of Health
- Electro-thermal management and balancing techniques
- Optimal design of second-life batteries
- Electrical and thermal safety issues
- Application of second-life batteries

## Message from the Editor-in-Chief

Take the opportunity to publish your original scientific work or a review paper concerning battery materials, battery technology or battery application within this new open access journal. Along with material science, the journal also addresses engineering and multidisciplinary research topics, such as cell and system design or storage system integration. Publishing proffers visibility for the benefit of other experts and facilitates discussion of the research results within the field. You are invited to publish your work, read published papers and to participate in topical discussions.

## Author Benefits

**Open Access:**— free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Inspec](#), [Ei Compendex](#), [CAPlus / SciFinder](#), and [other databases](#).

**Journal Rank:** JCR - Q2 (Electrochemistry) / CiteScore - Q2 (Electrical and Electronic Engineering)
