Deadline for manuscript  
submissions:

**closed (30 September 2023)**

### Message from the Guest Editors

Dear Colleagues,

Diagnosis of single deficits, and of dissociations between deficits, is key in both clinical and cognitive neuropsychology. While statistical techniques for neuropsychological diagnosis have shown considerable development in the last few decades, neuropsychological interpretation requires further attention. This Special Issue will bridge the gap between the rich statistical literature and the neglected theoretical nodes. Space will be provided for both theoretical and statistical studies, provided that the proposed statistical models are fully justified in terms of the inferences they allow on mental processes. This Special Issue seeks contributions on these and other topics, all relating to neuropsychological diagnosis of single deficits and/or dissociations. Methods that are clearly linked to the cognitive systems under study are particularly welcome.
