Message from the Guest Editor

Dear Colleagues,

Soft drinks are popular non-alcoholic beverages that often contain carbonated water, sweeteners, colors, and flavors. Soft drinks have often been scrutinized for various aspects, such as sweetener content and acidity.

This Special Issue on Diversity and Flavor Innovations of Soft Drinks is looking for original research manuscripts that capture formulation, technology, or packaging effects on product properties and on consumer acceptance. Manuscripts investigating this product category from different aspects such as nutrition, chemical composition, sensory attributes, volatile components, and consumer perceptions are welcome. Innovative product development and analysis approaches are encouraged.

Dr. Kadri Koppel
