Medicine, Tucson, AZ 85724, USA

Deadline for manuscript
submissions:

closed (15 October 2023)

Message from the Guest Editors

After injury, the body undergoes a complicated healing process that could lead to either fibrotic tissue repair or tissue regeneration. In humans, these injuries result in scar tissue formation and diminished function of the organ of interest.

Over the past few decades, significant advances in bioengineering technologies have drastically improved our ability to fine tune molecular, cellular, and tissue healing kinetics across a vast range of organ systems and disease states. These developments have opened up a new frontier in novel biomedical engineering techniques for the promotion of healing and regeneration.

We aim to capture the application of a diverse range of new biomedical technologies in fields such as biomolecular/cellular/tissue engineering, biomaterials, biomimetics, biomechanics, bioelectronics, and biochemical engineering to study new translational avenues for wound healing and regenerative medicine. This Special Issue will demonstrate how these techniques can modulate cellular recruitment, cellular signaling, molecular machinery, extracellular matrix deposition, and subsequent tissue remodeling to promote beneficial healing or even regeneration after injury.

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Bioengineering* (ISSN 2306-5354). *Bioengineering* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. *Bioengineering* provides an advanced forum for the science and technology of bioengineering. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Engineering, Biomedical*)

Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.6 days after submission; acceptance to publication is undertaken in 3.1 days (median values for papers published in this journal in the first half of 2024).
