Big Biological Data for Personalized Medicine

Message from the Guest Editor

Advances in high-throughput technologies and data-mining techniques have brought us into the “big biological data” era, a perfect time to develop personalized medicine for complex diseases, including cancer. With the help of multi-omics single-cell-level studies, more and more disease mechanisms and biomarkers are being revealed, which greatly improves the development of personalized medicine. To keep up with and contribute to this trend, we are collecting profound works in areas including, but not limited to, next- and third-generation sequencing data analysis, mass spectrometry analysis, single-cell data analysis, clinical (imaging) data analysis, data-driven biomarker discovery, systems/network biomarker discovery, biological/biomedical database development and bioinformatics tool development. With this collection, we hope to connect data scientists, biologists and clinicians to form a collaborative network and provide a platform where people can share resources and contribute most to personalized medicine in the big biological data era.

Guest Editor

Dr. Wanwei Zhang

Department of Microbiology and Immunology, Vagelos College of Physicians and Surgeons, Columbia University, New York, NY 10032, USA

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Bioengineering* (ISSN 2306-5354). *Bioengineering* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. *Bioengineering* provides an advanced forum for the science and technology of bioengineering. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Anthony Guiseppi-Elie

Department of Biomedical Engineering, Texas A&M University, College Station, TX 77843, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Biomedical) Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.6 days after submission; acceptance to publication is undertaken in 3.1 days (median values for papers published in this journal in the first half of 2024).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
