Beneficial Soil Bacteria: Many Recipes to Promote Plant Growth and Protection

Guest Editors:

Dr. Ana Alexandre

Department of Biology,
Mediterranean Institute for
Agriculture, Environment and
Development (MED), University of
Évora, 7004-516 Évora, Portugal

Dr. Kathrin Wipfel

Max Planck Institute for Plant
Breeding Research, Cologne,
Germany

Deadline for manuscript
submissions:

closed (20 March 2023)

Message from the Guest Editors

Agriculture is currently facing a number of ecologic and economic challenges. On the one hand, climate change has highlighted the importance of crop resilience and genetic diversity, and there is a demand for a more efficient use of resources and the implementation of sustainable and eco-friendly practices. On the other hand, these aspects are often neglected due to the constant pressure to increase food production in the light of a growing world population.

Soil bacteria have the potential to promote plant growth and contribute to plant protection against biotic and abiotic stresses in an ecologically sustainable way. From fundamental research focusing on individual genes or metabolic networks to large-scale applied field studies, there are many diverse approaches to further our understanding of the role and impact of beneficial soil bacteria on crop production.

This Special Issue is dedicated to research performed on all aspects of the biology of these bacteria as well as host interaction mechanisms. We invite scientists to contribute with original research and review articles.

Special Issue

an Open Access Journal by MDPI

Editors-in-Chief

Prof. Dr. Jukka Finne

Research Programme in
Molecular and Integrative
Biosciences, Faculty of Biological
and Environmental Sciences,
University of Helsinki, P.O. Box
56, FI-00014 Helsinki, Finland

Prof. Dr. Andrés Moya

Integrative Systems Biology
Institute, University of Valencia
and CSIC, 46980 Valencia, Spain

Message from the Editorial Board

A major strength of biological science is the diversity of approaches that biological scientists apply to their research problems. *Biology* reflects this diversity and brings together studies employing the varied experimental and theoretical approaches that are fueling biological discovery. *Biology*, the journal, is a fully peer-reviewed publication with a rapid and economical route to open access publication and is listed on PubMed. All articles are peer-reviewed and the editorial focus is on determining that the work is scientifically sound rather than trying to predict its future impact.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biology) / CiteScore - Q1 (General Agricultural and Biological Sciences)
