of Pisa, Via Derna 1, 56126 Pisa,  
Italy

Deadline for manuscript  
submissions:

**closed (31 December 2022)**

### Message from the Guest Editor

As a consequence of increasing systematic knowledge, the scientific names of plants often change. While since about 15 years ago family-level circumscriptions became stable, species are often recombined under different genera or synonymized with others. This is perceived by taxonomy users, either in the scientific community or in wider society, as a relevant and often not understood problem. In general, and still today, it is much easier to describe a new species than to definitely prove that it is not worthy of recognition on systematic grounds. This is resulting in worldwide taxonomic inflation, which is also causing inconsistencies in conservation biology. This problem could be superseded only by adopting extreme caution before describing new taxa and, above all, by adopting integrated approaches to taxonomy. Finally, another topic which is becoming more and more important, related to floristics, concerns the free availability of verified and reliable primary biodiversity data.

We propose in this Special Issue to highlight the state of the art of current taxonomic and systematic research as well as its fundamental contribution to plant science and biology in general.

an Open Access Journal by MDPI

## Editors-in-Chief

### Prof. Dr. Jukka Finne

Research Programme in  
Molecular and Integrative  
Biosciences, Faculty of Biological  
and Environmental Sciences,  
University of Helsinki, P.O. Box  
56, FI-00014 Helsinki, Finland

### Prof. Dr. Andrés Moya

Institute, University of Valencia  
and CSIC, 46980 Valencia, Spain

## Message from the Editorial Board

A major strength of biological science is the diversity of approaches that biological scientists apply to their research problems. *Biology* reflects this diversity and brings together studies employing the varied experimental and theoretical approaches that are fueling biological discovery. *Biology*, the journal, is a fully peer-reviewed publication with a rapid and economical route to open access publication and is listed on PubMed. All articles are peer-reviewed and the editorial focus is on determining that the work is scientifically sound rather than trying to predict its future impact.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (Biology) / CiteScore - Q1 (General Agricultural and Biological Sciences)
