submissions:

closed (30 November 2021)

Message from the Guest Editors

In pluripotent stem cells (PSCs) as embryonic and induced pluripotent stem cells (iPSCs), the characteristics as epigenetic state, gene expression profiles, and the cellular localization of proteins are quite different from differentiated and somatic cells. Due to such differences, the response to environmental stimuli and stresses as hypoxic, heat, and oxidative stress and chemicals, some ligands of channels and receptors etc is also different between PSCs and differentiated cells. For example, PSCs are highly sensitive to proteotoxic stress by MG132 and the levels of stress-responsive transcription factors change during differentiation.

In this special issue, we would like to focus on such difference and the mechanism of it. By clarifying it, we can know the characteristics of stress response of PSCs and set up the differentiation protocol to somatic tissues by considering it. Furthermore, it could serve an useful information for the research on toxicology of chemicals in embryos and on iPSC-derived stress-related disease model like neurodegenerative diseases.

an Open Access Journal by MDPI

Editors-in-Chief

Prof. Dr. Jukka Finne

Research Programme in
Molecular and Integrative
Biosciences, Faculty of Biological
and Environmental Sciences,

Message from the Editorial Board

A major strength of biological science is the diversity of approaches that biological scientists apply to their research problems. *Biology* reflects this diversity and brings together studies employing the varied experimental and theoretical approaches that are fueling biological discovery. *Biology*, the journal, is a fully peer-reviewed publication with a rapid and economical route to open access publication and is listed on PubMed. All articles are peer-reviewed and the editorial focus is on determining that the work is scientifically sound rather than trying to predict its future impact.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biology) / CiteScore - Q1 (General Agricultural and Biological Sciences)
