Deadline for manuscript
submissions:

closed (31 August 2024)

Message from the Guest Editors

Keratinocytes and melanocytes in the epidermis and fibroblasts in the dermal compartment, as well as immune cells, sebocytes and endothelial cells, are strictly interconnected. This complex cooperation among the different cell populations guarantees proper skin homeostasis in physiological processes such as barrier function, pigmentation, and regeneration. Parallel to cell-cell interactions, extracellular matrix (ECM) proteins such as fibronectin and collagens exert an active role in several cutaneous physiological processes. The cross-talk among the skin components is under the tight control of intracellular signaling pathways triggered by a plethora of growth factors, cytokines, hormones, and bioactive lipids acting both in an autocrine and paracrine manner. The deregulation of these interactions contributes to the development of several pathological conditions such as inflammatory skin diseases, pigmentary disorders and melanoma and non-melanoma skin cancer. . This Special Issue aims to collect advances in the field of dermal-epidermal cross-talk regulating cutaneous homeostasis.

Message from the Editorial Board

A major strength of biological science is the diversity of approaches that biological scientists apply to their research problems. *Biology* reflects this diversity and brings together studies employing the varied experimental and theoretical approaches that are fueling biological discovery. *Biology*, the journal, is a fully peer-reviewed publication with a rapid and economical route to open access publication and is listed on PubMed. All articles are peer-reviewed and the editorial focus is on determining that the work is scientifically sound rather than trying to predict its future impact.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biology) / CiteScore - Q1 (General Agricultural and Biological Sciences)
