Extracellular Vesicles: Biogenesis and Functions in the Complex Landscape of Differentiation and Disease

Guest Editor:

Dr. Sorina Dinescu

Department of Biochemistry and
Molecular Biology, University of
Bucharest, Bucharest, Romania

Deadline for manuscript
submissions:

31 March 2025

Message from the Guest Editor

We are pleased to invite you to explore the dynamic landscape of EVs research, starting from novel experimental approaches for isolation and characterization, investigation of their cargo and impact on the immediately neighbouring milieu, to the potential use of these EVs as biomarkers in differentiation processes, as well as in disease diagnosis and prognosis. Extracellular vesicles (EVs) are membrane-derived nanovesicles secreted by living cells which function as potent mediators of intercellular communication. Cargos in EVs can serve as external stimuli for recipient cells, hence influencing the intercellular communication pathway under certain physiological and pathological conditions. Nevertheless, EVs have gained particular interest as nanosized vehicles for delivery of molecular components, thus aiming to become an important therapeutic tool to fight against disease.

In this context, the aim of this special issue is to highlight the biological role of EVs during stem cell differentiation stages, during development and during pathophysiological processes, including their potential use as biomarkers for monitoring and improving disease diagnosis and progression.

Message from the Editorial Board

A major strength of biological science is the diversity of approaches that biological scientists apply to their research problems. *Biology* reflects this diversity and brings together studies employing the varied experimental and theoretical approaches that are fueling biological discovery. *Biology*, the journal, is a fully peer-reviewed publication with a rapid and economical route to open access publication and is listed on PubMed. All articles are peer-reviewed and the editorial focus is on determining that the work is scientifically sound rather than trying to predict its future impact.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biology) / CiteScore - Q1 (General Agricultural and Biological Sciences)
