Message from the Guest Editor

Dear Colleagues,

Reproductive health and fertility preservation are facing the detrimental effects of increasing environmental, lifestyle or occupational exposure to reproductive hazards, such as, for example, agricultural chemicals, smoke, alcohol, drugs, food additives, contaminants from plastics, industrial waste disposal, radiation, excessive vibration or heat.

Reproductive organs are sensitive targets of pollutants, but their unique role in developing germ cells and growing embryos leads to a different vulnerability among mammals due to species-specific adaptive capacities.

This Special Issue is open to original research papers and reviews on in vivo, ex vivo, and in vitro models highlighting toxicant-induced injuries to the mammalian reproductive system and related pregnancy outcomes, with a focus on the molecular, biochemical, physiological, and morphological effects exerted by chemical and physical agents on fertility.

Prof. Maria Grazia Palmerini

Message from the Editorial Board

A major strength of biological science is the diversity of approaches that biological scientists apply to their research problems. *Biology* reflects this diversity and brings together studies employing the varied experimental and theoretical approaches that are fueling biological discovery. *Biology*, the journal, is a fully peer-reviewed publication with a rapid and economical route to open access publication and is listed on PubMed. All articles are peer-reviewed and the editorial focus is on determining that the work is scientifically sound rather than trying to predict its future impact.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biology) / CiteScore - Q1 (General Agricultural and Biological Sciences)
