Deadline for manuscript  
submissions:

**closed (31 December 2021)**

### Message from the Guest Editor

Dear Colleagues,

The human papillomavirus (HPV) family comprises more than 170 different types that preferentially infect the mucosa of the genitals, upper-respiratory tract, or skin. HPV infections are responsible for approximately 5% of all cancers and are associated with 30% of all pathogen-related cancers.

Long-term infection, the integration of the viral DNA into the human genome, and the constitutive expression of HPV oncoproteins cause the accumulation of various molecular changes in the infected cells leading to cancer development and progression. However, there is still a gap in the knowledge on how different HPV genotypes lead to cancer and how HPV-related pathways lead to carcinogenesis. Elucidating these aspects may help in developing new targets for treating HPV-associated cancer.

This Special Issue will highlight the mechanism of HPV's involvement in cancer development. We welcome submissions that cover any relevant topics of research results that will help to advance our understanding of HPV carcinogenesis and in developing new targets for the prevention and therapy of HPV-associated cancers.

## Editors-in-Chief

### Prof. Dr. Jukka Finne

Research Programme in  
Molecular and Integrative  
Biosciences, Faculty of Biological  
and Environmental Sciences,  
University of Helsinki, P.O. Box  
56, FI-00014 Helsinki, Finland

### Prof. Dr. Andrés Moya

Integrative Systems Biology  
Institute, University of Valencia  
and CSIC, 46980 Valencia, Spain

## Message from the Editorial Board

A major strength of biological science is the diversity of approaches that biological scientists apply to their research problems. *Biology* reflects this diversity and brings together studies employing the varied experimental and theoretical approaches that are fueling biological discovery. *Biology*, the journal, is a fully peer-reviewed publication with a rapid and economical route to open access publication and is listed on PubMed. All articles are peer-reviewed and the editorial focus is on determining that the work is scientifically sound rather than trying to predict its future impact.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (Biology) / CiteScore - Q1 (General Agricultural and Biological Sciences)
