Message from the Guest Editor

Dear Colleagues,

It is becoming increasingly evident that intracellular proteins can specifically regulate the direction of lipid transport within cells, thereby influencing the storage, synthesis and export of lipids, and the activity of nuclear receptor transcription factors involved in lipid and lipoprotein metabolism. Defective intracellular lipid transport may also contribute to a number of disease states, including metabolic disorders and tumorigenesis.

For this special issue, we invite research articles on aspects of lipid transport within cells and tissues, and particularly those which contribute to our understanding of the role of intracellular lipid transporters in pathological conditions.

Prof. Annette Graham

Message from the Editorial Board

A major strength of biological science is the diversity of approaches that biological scientists apply to their research problems. *Biology* reflects this diversity and brings together studies employing the varied experimental and theoretical approaches that are fueling biological discovery. *Biology*, the journal, is a fully peer-reviewed publication with a rapid and economical route to open access publication and is listed on PubMed. All articles are peer-reviewed and the editorial focus is on determining that the work is scientifically sound rather than trying to predict its future impact.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biology) / CiteScore - Q1 (General Agricultural and Biological Sciences)
