Message from the Guest Editor

Dear Colleagues,

Vasoactive intestinal peptide (VIP) is a 28-amino acid neuropeptide with a broad expression profile, regulating diurnal feeding behavior, metabolism, and immunity. VIP is delivered by the peripheral nervous system to numerous organs, including the mucosa-associated lymphoid tissues of the pulmonary and gastrointestinal tract. VIP signals with a high affinity ($K_d = 1$ nM) through at least two endogenous G protein-coupled receptors (GPCR), called vasoactive intestinal peptide/pituitary adenylyl cyclase activating polypeptide (VPAC) 1 and VPAC2. A third low affinity receptor ($K_d = 1$ μ M), termed PAC1, also binds VIP.

I invite my colleagues in this field to contribute to this Special Issue on VIP/PACAP and its related peptides in health and disease by providing research articles or relevant topic reviews. This Special Issue will act as an important depository for novel and review research summaries in the VIP/PACAP family of signaling peptides in health and disease.

Message from the Editorial Board

A major strength of biological science is the diversity of approaches that biological scientists apply to their research problems. *Biology* reflects this diversity and brings together studies employing the varied experimental and theoretical approaches that are fueling biological discovery. *Biology*, the journal, is a fully peer-reviewed publication with a rapid and economical route to open access publication and is listed on PubMed. All articles are peer-reviewed and the editorial focus is on determining that the work is scientifically sound rather than trying to predict its future impact.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biology) / CiteScore - Q1 (General Agricultural and Biological Sciences)
