Message from the Guest Editors

Dear Colleagues,

Drug resistance is a complex phenomenon resulting from one or more mechanisms which render cells resistant to anticancer drugs. Molecular hallmarks of cancer and therapeutics against drug resistance mechanisms are the leading targets for cancer treatment. Molecular targeted therapy is gaining interest due to its specificity to cancer while sparing normal cells.

In this context, we are proposing a new Special Issue encompassing these two major molecular pathways involved in cancer treatment, such as the determinations of new cancer-related molecular targets, the development of drugs that block them, and drugs that aim to avoid resistance to treatment. We invite the submission of innovative research papers and review articles discussing new molecular targets or anticancer drugs. Therefore, this Special Issue aims to approach novel molecular targets, their bullets, and possible resistance mechanisms that might be targeted to potentiate more durable and effective responses for cancer therapy.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Biomedicines (ISSN 2227-9059) is an open access journal devoted to all aspects of research on human health and disease, the discovery and characterization of new therapeutic targets, therapeutic strategies, and research of naturally driven biomedicines, pharmaceuticals, and biopharmaceutical products. Topics include pathogenesis mechanisms of diseases, translational medical research, biomaterial in biomedical research, natural bioactive molecules, biologics, vaccines, gene therapies, cell-based therapies, targeted specific antibodies, recombinant therapeutic proteins, nanobiotechnology driven products, targeted therapy, bioimaging, biosensors, biomarkers, and biosimilars. The journal is open for publication of studies conducted at the basic science and preclinical research levels. We invite you to consider submitting your work to *Biomedicines*, be it original research, review articles, or developing Special Issues of current key topics.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [PMC](#), [CAPUS / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q1 (*Pharmacology & Pharmacy*) / CiteScore - Q2 (*Medicine (miscellaneous)*)
