## Synaptic Transmission: From Molecular to Neural Network Levels 2.0

Guest Editors:

**Dr. Simona Tritto**

Department of Brain and Behavioral Sciences, University of Pavia, Pavia, Italy

**Dr. Lisa Mapelli**

Department of Brain and Behavioral Sciences, University of Pavia, Pavia, Italy

Deadline for manuscript submissions:

**closed (30 June 2024)**

### Message from the Guest Editors

It is well known that in the central nervous system, the number of neurons is around  $10^{12}$ , and the number of synapses can reach a thousand billion. This anatomical complexity is heightened by the complexity of mechanisms underlying synaptic transmission. Every connection adds processing features to the network activity, originating an ensemble that shows emerging properties that are difficult to track back to the single synapse level. Here comes the need for both bottom-up and top-down approaches to understand brain activity: how do the different components of neural machinery interact to generate such complex systems? How can the understanding of new pathways be used for pathologies' treatments? Investigations at these two levels are both needed to reach a comprehensive view of brain activity.

This Special Issue aims to provide a broad picture of the latest discoveries on synaptic transmission and its impact on network activities. Both experimental and computational works are welcomed, unraveling new properties of specific synapses or how they affect neural networks activity, both in physiological and pathological conditions.

## Message from the Editor-in-Chief

*Biomedicines* (ISSN 2227-9059) is an open access journal devoted to all aspects of research on human health and disease, the discovery and characterization of new therapeutic targets, therapeutic strategies, and research of naturally driven biomedicines, pharmaceuticals, and biopharmaceutical products. Topics include pathogenesis mechanisms of diseases, translational medical research, biomaterial in biomedical research, natural bioactive molecules, biologics, vaccines, gene therapies, cell-based therapies, targeted specific antibodies, recombinant therapeutic proteins, nanobiotechnology driven products, targeted therapy, bioimaging, biosensors, biomarkers, and biosimilars. The journal is open for publication of studies conducted at the basic science and preclinical research levels. We invite you to consider submitting your work to *Biomedicines*, be it original research, review articles, or developing Special Issues of current key topics.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within *Scopus*, *SCIE (Web of Science)*, *PubMed*, *PMC*, *CAPLus / SciFinder*, and other databases.

**Journal Rank:** JCR - Q1 (Pharmacology and Pharmacy) / CiteScore - Q2 (*Medicine (miscellaneous)*)
